

Abstract

In order to finish a textile material (14) in different
5 sections with different physical and/or chemical properties
it is proposed to provide these sections (54, 56, 58, 60, 62)
with finishing layers by the rotary screen printing process,
each finishing layer having a bonding agent (70)⁶ in which
microcapsules (68; 74; 80; 82) are distributed.
